

# RESIDENTIAL

*Let's Work Together.*

## A top-down photograph of a still life arrangement featuring various materials. On the left, a stack of light-colored wooden slats is partially covered by a dark green leafy branch. In the center, a large, dark, circular object with a textured surface is prominent. To its right, a square of light-colored stone is visible. Below the circular object, a square of dark wood with a light-colored stone inlay is shown. In the bottom right corner, three small, irregular stones are scattered. The background is a dark, textured surface.

# MADE IN THE UK. SINCE 1901

Johnson Tiles is the UK's only large-scale manufacturer of ceramic tiles. Since 1901 we've been designing and making the finest selection of ceramic wall tiles, right here in the UK. Our portfolio of sustainable, British-made products is strengthened by complementary sourced collections of ceramic and porcelain floor and wall tiles.

Being a celebrated UK heritage brand is part of our culture, but the Johnson Tiles success story is built on innovation. With 120 years' experience, we are consistently raising the bar in terms of inspirational design, quality of service, and sustainability leadership.

# WE MAKE IT. SUSTAINABLE

Proudly operating from our home in the Potteries' heartland of Stoke-on-Trent, our commitment to sustainable manufacturing has seen us develop over 50 eco-friendly ranges, inspiring and enhancing projects around the world.

It's not just what we make, but how we make it. We've dedicated over two decades to finding better ways to operate across every aspect of our business by cutting energy consumption, diverting waste and reducing carbon emissions and we are now the only UK tile manufacturer to hold an EPD certificate! Our Environmental Product Declaration transparently communicates the environmental performance and impact of our tiles over their lifetime, and it signals our commitment to measuring the environmental impacts of our products and the strive to discover ways to further reduce this.

We have also carefully calibrated our ceramic recipe to ensure that every single tile we manufacture contains up to 20% recycled ceramic material as part of our pioneering ceramic waste recycling system.

Our latest initiative has seen us eradicate single-use plastics from the packaging solution of our UK-manufactured ceramics, making us the first tile manufacturer to do so. The packaging components of our pallets are: 100% recycled and recyclable cardboard; our carbon neutral, 100% recyclable, plant-based sugar cane wrap; and re-used, re-usable wooden pallets.

We're constantly improving, making sure our setup isn't just world class, but also making a difference on the issues that impact us all, at a local and global level.

## FIRST CLASS SERVICE

Here at Johnson Tiles, we don't just design and manufacture amazing products, we deliver on excellent service too. As part of a comprehensive suite of services, we provide industry leading bespoke buying guides, showcasing a tailored product selection to suit any residential development. Accompanying sample hand board packs are also available, customised for the requirements of any site or product selection. Clearly and easily display your development details with our first-class support materials.

We also offer a free CAD design service for all contract tiling applications. Our in-house team uses the latest digital software to create bespoke fixing and installation layouts. A free Bill of Quantity service is also offered in conjunction with the CAD design service. The quantities can be extracted from drawings sent to us, or from drawings created in-house.

Our Technical Support team can produce detailed reports in the M40 format. This gives comprehensive guidelines of product suitability, adhesive and grout selection, background suitability and preparation guidance.

You spec it – we'll stock it! Specify any selection of our products on your residential development and we guarantee that we'll stock it right here in the UK at our manufacturing hub in the Potteries. Have peace of mind that your bespoke specification is on hand, exactly when you need it.

And, with an extensive distribution network, we can arrange delivery direct to site, creating even more flexibility. Our responsive logistics team can also arrange next day deliveries for those occasions where schedules are tight and a fast turn-around is essential.

Plus, complete your project with Norcros Adhesives products and you'll qualify for a 25-year guarantee!

With our extensive list of ancillary services, you can be assured that Johnson Tiles is the right supplier for you.

# PRODUCT INSPIRATION

Inspiration can be found anywhere. Our in-house Design and Development teams search the world to find new and inspiring materials and ideas. Driven by creative passion, influence is drawn from everywhere, from the colours and tones of nature to the details of world architecture. Our design experience and technical excellence transform this journey into unique tiles and products.

We're always happy to share our creativity with customers and clients in search of design inspiration, offering expert advice on design schemes, adding our experience to layouts and bespoke installations, or finding a product to match each individual creative vision.

Whatever the project, however large or small the budget and no matter how demanding the technical challenges, Johnson Tiles is perfectly placed to match your requirements.

Over the next few pages, discover a curated collection of inspirational photography for all aspects of the home, from bathrooms and kitchens to living areas and outdoor spaces. This is followed by a hand-picked selection of our product ranges, perfect for any and all residential applications... Welcome to our world!

## PRODUCT INSPIRATION: BATHROOMS

Create a relaxing oasis to retreat to with our collection of bathroom and en-suite wall and floor tiles. Incorporate different size formats, finishes, mosaics, or textures for striking interior designs, perfect for any size and style of project.

## PRODUCT INSPIRATION: KITCHENS

As the heart of the home the kitchen reflects individual style. From nature-inspired wood effect products to striking terrazzo designs, slim brick wall tiles to large-format floor tiles, we invite you to experiment with textures and colours for limitless creativity.

## PRODUCT INSPIRATION: LIVING AREAS

Whether it's the hallway, utility, bedroom, or lounge, we have tiles for the whole home; tiles to live with. Traditional or contemporary wall tiles provide the 'wow' factor and match with hard-wearing, stylish floor tiles for a stunning end result.

## PRODUCT INSPIRATION: **OUTDOOR SPACES**

Make the most of your natural surroundings by extending living spaces to the outdoors. We have an array of products suitable for external use, combining performance with style. Carry features such as colour palettes from the indoors out, to create a sense of continuity and maximise space.

# PRODUCT CHOICE

We have an inspirational range of tiles covering all size formats, styles, shapes, and colours. Our portfolio consists of 3 product collections: Intro, Select and Absolute. Navigate through the entire selection, co-ordinating both colour and style. Whatever your budget, we're confident we have what you're looking for.

Echo the characteristics of stone, concrete, marble, or wood. Go for bold and striking results with our solid colour ranges. Or opt for understated elegance with our simple white products. Our portfolio offers products that are ideal for all wall and floor applications, including options for wet room areas and even extending tiling outdoors.

# SOUTH BANK

GLAZED CERAMIC | WALL TILES

COLOUR SELECT

Sizes: C W 245x75x8mm

Finishes: C W Gloss

“This award-winning range of UK-manufactured ceramic wall tiles is available in 8 on-trend colours and a new slim size of 245x75mm. South Bank offers a transparent gloss finish possessing depth and variation of contemporary colour. The slim format allows for the creation of truly unique lay patterns to maximise the creative possibilities within any interior. Featuring the signature colours of Azure, Blossom and Dusk, which are underpinned by a complementary, neutral palette ranging from the subtle, calming Snow to the warmer hue of Pearl, this range allows for the creation of diverse and harmonious colour combinations.”

# 1901

GLAZED CERAMIC | WALL TILES

COLOUR STRUCTURE SELECT

Sizes: C W 245x75x8mm

Finishes: C W Gloss

“A proud celebration of our heritage, 1901 pays homage to traditional glaze effects. With a rustic structure on the contemporary slim brick format of 245x75mm, 1901 gives the illusion of beautiful, handcrafted qualities. The seductive colour palette takes inspiration from the Astral trend, showcasing rich indigo, sumptuous ruby and bottle green, along with the classic tones of white, black and grey. Named for aspects of our history, this collection creates an opulent, luxurious aesthetic.”

## PAR 3 DEVELOPMENT CYDEN HOMES

HUMBERSTON, LINCOLNSHIRE

The Par 3 development in Humberston has been meticulously designed by Cyden Homes and Jonathan Hendry Architects to provide beautiful properties set amongst the fairways of the former Humberston Golf Course. Such a unique setting required the highest quality and most cutting-edge interior products. For the modern kitchens and bathrooms, Johnson Tiles' Natural Tones, Prismatics, and Imperial ranges succeeded in securing stunning results.

# GREENWICH TOWNHOUSE THE 2LG STUDIO

GREENWICH, LONDON

Combining pastel tones with graphic, monochrome accessories, interior design duo 2 Lovely Gays had just the tile in mind when it came to complementing their Scandinavian-inspired interiors project, for this townhouse in Greenwich. Using Johnson Tiles' Prismatics, 200x100mm in Peacock, throughout the kitchen and dining areas, a contemporary scheme unites the living space while remaining fresh and family-friendly.

# WEDGWOOD PARK DAVID WILSON HOMES

WEDGWOOD, STAFFORDSHIRE

A flagship development of 209 executive homes set in the heart of the Staffordshire countryside, Wedgwood Park is the latest residential venture by David Wilson. Paying careful consideration to the exterior and interior of each individual home, only the highest quality products would suffice. Johnson Tiles' Savoy, Tones, Imperial and Natural Tones ranges ensured style and sophistication for both the kitchens and bathrooms of the 'Lakeside' and 'Village' plots.

## LUXURY LOFT LIVING THE DRAPERY APARTMENTS

SOUTHEND-ON-SEA, ESSEX

For Southend's Drapery luxury loft apartments, only the most stylish, cutting-edge tiles would fit the bill for its en-suites and shower rooms. Johnson Tiles' Loft range of glazed porcelain wall and floor tiles injected an element of industrial chic to the high-end interiors, perfectly mirroring the on-trend, creative feel of the overall scheme.

# KINGSWOOD MANOR MACBRYDE HOMES

WOOLTON, LIVERPOOL

Kingswood Manor is the latest high-end residential development by Macbryde Homes, comprising just 10 exclusive four-bedroom properties, the Signature collection demonstrates only the finest finishes across its interiors. Johnson Tiles' Natural Tones features throughout the bathrooms and en suites, and the Imperial range decorates the main kitchen and dining areas, whilst City Touchstone adds structured style to the bathrooms' sink and shower zones.

# JUNIPER HOUSE THE 2LG STUDIO

KEW, LONDON

A combination of Prismatics in 100x100mm and 200x100mm helped achieve monochrome perfection for the bathroom at Juniper House; a residential property in Kew recently renovated by the talented design duo, 2LG Studio. In the kitchen, a mixture of matt and gloss tiles interact with the light to produce subtle surface effects, while the en-suite introduces a hint of pastel with Prismatics in Harebell, 100x100mm.

# ARL DEVELOPMENTS GLADMAN HOMES

ADLINGTON, LANCASHIRE

Our Ashlar range was specified at two of the most recent developments by Adlington Retirement Living (ARL). ARL aims to create beautiful, spacious homes for the older generation, but alongside this, ARL also creates communities with shared amenities which aim to bring residents together. Ashlar Weathered White suits the airy, bright feel of the bathrooms and helps to create the sense of a modern, relaxing oasis. The Crafted Grey has a deeper tone, building a sense of warmth and comfort, to make the bathroom a sanctuary to retreat to.

**Note:** Due to the manufacturing process of all floor tiles there may be small variations in slip resistance. Given this, please refer to our website for the most up-to-date information. The slip resistance properties of a surface can only be maintained with the implementation of an effective regular cleaning and maintenance regime. The frequency of cleaning should be determined by the property manager based on the potential level of surface contaminants. The need for an additional regular cleaning and maintenance regime is further heightened when tiles are used for external floor and wet barefoot applications. PTV (4S): Pendulum Test Value – Slider 96. PTV (TRL): Pendulum Test Value – Slider 55. R Value (DIN 51130). Wet Ramp (DIN 51097). PEI: Porcelain Enamel Institute.

## Installation Advice

### Codes of Practice

All fixing of floor and cladding tiles should be in accordance with the following codes of practice guidelines:

#### BS5385 Part 1 - 2018

*Design and installation of internal ceramic, natural stone and mosaic wall tiling in normal conditions.*

#### BS5385 Part 2 - 2015

*Design and installation of external ceramic, natural stone and mosaic wall tiling in normal conditions.*

#### BS5385 Part 3 - 2014

*Design and installation of internal and external ceramic and mosaic floor tiling in normal conditions.*

#### BS5385 Part 4 - 2015

*Design and installation of ceramic and mosaic tiling in specific conditions.*

#### BS5385 Part 5 - 2009

*Design and installation of terrazzo, natural stone, and agglomerated stone tile and slab flooring.*

#### BS8000 Part 11 - 2011

*Workmanship on building sites. Internal and external wall and floor tiling. Ceramic and agglomerated stone tiles, natural stone and terrazzo tiles and slabs and mosaics.*

B111 (Ceramic) tiles smaller than 400x300mm require the use of an adhesive with a D1 or D2 classification. Larger tiles require an adhesive with C2 classification.

Bla (Porcelain) tiles require the use of a polymer modified adhesive with a classification of C2\* and grouts specifically formulated for the fixing and grouting of porcelain tiles.

*\* Check with the adhesive manufacturer for additional C1 product suitability.*

### Substrates

Before tiling is commenced it is important to ensure that the correct minimum curing periods have been observed for all substrates:

#### Concrete (6 Weeks)

#### Screed - Non Modified (3 Weeks)

#### Rendering - Non Modified (2 Weeks)

#### Gypsum Plastering (4 Weeks)

#### Brickwork / Blockwork (6 Weeks)

Accuracy of the substrate must be checked to ensure that the guidance given in BS5385 has been achieved i.e. 'local variations in level for a nominally flat floor or wall should be such that, when checked with a 2m

straight-edge, any gap under the straight-edge between points of contact does not exceed 3mm".

### Movement Joints

The location, type and scope of all movement joints must be ascertained prior to any fixing works. All structural joints must be followed through to the face of the tile at full width with intermediate movement joints (minimum 6mm wide) being situated at:

#### Changes of Plane (Incl. Wall Corners)

#### Wall / Floor Junctions

#### Where Tiling Abuts Other Materials

Additionally at 3 to 4.5m maximum centres for wall tiling and 8 to 10m maximum bay centres for floor tiling (in suspended floors the bay dimensions should be reduced by providing additional joints over supporting walls and beams).

Movement joints can either be filled with a suitable backer, bond breaker and filler (e.g. silicone for walls tiles only or epoxy polysulphide for floor and wall tiles – please check with manufacturer for suitability) or be of the pre-formed variety.

### Design / Layout

Consideration to locations of plane changes and room sizes should be undertaken to ensure the best tile size is selected to minimise cutting and improve aesthetics.

### Adhesives

Adhesives should be in accordance with BS EN 12004, Class D1 or D2 for ceramic tiles and Class C2 or C1\* for porcelain tiles. Particular adhesive choice will be governed by the type of substrate.

*\* Check with the adhesive manufacturer for additional C1 product suitability.*

Johnson Tiles recommends the use of Norcros Adhesives products – see below:

#### Ceramic Tiles (B111)

Substrate	Product
Concrete	One Part Flexible
Sand / Cement Screed	One Part Flexible
Brick / Blockwork	One Part Flexible
Plaster Gypsum	One Part Flexible
Plasterboard	One Part Flexible

### Epoxy Grouts

It is essential that ALL residue must be removed from the surface of the tiles during the grouting process and before the resin cures. Failure to achieve this will result in a very difficult and expensive process using gel-type epoxy removers.

### Routine Cleaning

The regular use of detergents or other cleaning agents, which are excessively acidic or alkaline could cause irreversible damage to the ceramic tile surface. Degreasing agents that contain wax, sodium silicate or other additives which leave sticky deposits and thus retain dirt should be avoided. Oil residues or build-ups of wax can be removed with a proprietary wax and polish remover.

### Manual Cleaning

In normal conditions tiles require little maintenance and can be easily kept clean by sweeping and then mopping with warm water to which a neutral or nearly neutral detergent has been added. The cleaning solution should remain on the floor for 5 to 15 minutes (see manufacturers instructions) to allow it to penetrate and emulsify the dirt after which it should be removed by rinsing thoroughly with clean water. The rinsing process removes the dirt so the use of clean water is important.

### Mechanical Cleaning

For larger floor areas or areas of textured tiles the use of a rotary scrubbing machine is recommended (machines should not be used at speeds in excess of 450rpm). The choice of brush type is very important. Union mix brushes are suitable for light washing and scrubbing, polypropylene brushes are suitable where dirt deposits are especially heavy. The cleaning solution should remain on the floor for 5 to 15 minutes (see manufacturers instructions) after which a secondary scrubbing action and clean mop or suction should be undertaken to remove the solution and dirt.

### Porcelain Tiles (Bla)

Substrate	Product
Concrete	Rapid Porcelain / Flexible
Sand / Cement Screed	Rapid Porcelain / Flexible
Wood Floors	Rapid Porcelain / Flexible*
Brick / Blockwork	Rapid Porcelain / Flexible
Plaster Gypsum	Rapid Porcelain / Flexible
Plasterboard	Rapid Porcelain / Flexible**

*\* Overlay with minimum 15mm WBP / Marine Ply and Prime using Norcros Adhesive Prime and Seal.*

*\*\* Prime using Norcros Adhesive Prime and Seal.*

### Grouts

The choice of grout type should reflect the expected service conditions of the installation.

For general internal wall tiling in dry conditions and walls subject to frequent wetting i.e. showers and pool halls, use Norcros Adhesives 4 in 1 Cement Based Grout – classified as CG2.

For walls where hygiene is important i.e. commercial kitchens and hospitals, use Norcros Adhesives Super Epoxy Grout – classified as RG1.

For general floor tiling use Norcros Adhesives 4 in 1 Flexible Wall and Floor Tile Grout – classified as CG2.

For floors subject to frequent wetting i.e. showers and pool halls, use Norcros Adhesives 4 in 1 Flexible Wall and Floor Tile Grout – classified ad CG2 (hard water areas) or Norcros Adhesives Super Epoxy Grout – classified as RG1 (soft water areas).

For specific adhesive and grout advice, please contact Norcros Adhesives technical helpline on +44 (0)1782 524 140.

### Fixing Tiles

All tiles should be fixed with a solid bed of adhesive, this ensures maximum durability and strength within the installation and long term adhesion performance. This is achieved with the use of a notched solid bed trowel. It is good practice to periodically remove a recently fixed tile to ensure that the correct bedding is being achieved and maintained. When fixing all tiles care must be taken to ensure that no lipping of tiles occurs.

All tiles shown in this brochure are recommended to be fixed with a nominal 3mm wide joint.

### High Pressure Cleaning

Tiles seldom require the use of high-pressure cleaning. Whilst the process will not damage the tiles care must be taken to avoid erosion of the grout. To minimise grout erosion ensure that the water beam is continually moved from side to side and not allowed to concentrate on the grouted joints. Water containing abrasives or steam cleaners should not be used on ceramic tiles.

### Wet Areas

Wet barefoot areas may attract build-ups of body fats, soaps, oil residues and organic growth. To prevent these a mildly acidic cleaning agent used regularly is preferable. If build-up has been allowed a preliminary deep clean with a proprietary cleaner is required followed by regular use of a mildly acidic cleaning agent solution.

### Periodic Deep Cleaning

Occasionally foreign matter may cause surface marks that cannot be removed with the usual cleaning processes and materials. If the surface mark cannot be removed, other materials should be considered (it's advisable to experiment on a small inconspicuous area):

**Paint** – Paint Remover

**Organic Stains** – Bleach / Washing Soda

**Rust** – Masonry Cleaner

**Oil / Fat / Grease** – Detergent or Degreaser

**Mould Growth** – Bleach / Proprietary Cleaner

**Tea / Coffee / Ink** – Bleach / Proprietary Cleaner

*Abrasive powders or cleaners should never be used on glazed or polished tiles.*

## Accessibility and Support

The Equality Act 2010 has replaced the Disability Discrimination Act and in general, carries forward the protection that the Disability Discrimination Act provided for disabled people. The Disability Discrimination Act was repealed in October 2010.

The Equality Act requires accessible environments to be provided for disabled people, either in their place of work or for access to goods, services or facilities (public spaces). Those commissioning new buildings or adaptations to existing buildings must consider the implications of the Equality Act and their ability to provide buildings that do not discriminate against disabled people (physical or mental impairments).

### Colour Reflectance (Contrast)

The Equality Act gives guidance on good visual contrast for the visually impaired between various elements of a building by the use of Light Reflectance Values (LRV).

LRV is a general term for contrast and is measured as the proportion of useful light reflected by a

## Pendulum Test Values (PTV)

The slip resistance of a floor finish is the most important safety consideration. Effective and suitable slip resistant characteristics will reduce the likelihood of slipping; particularly for older, mobility and visually impaired people.

Pendulum tests are the standard and preferred Heath and Safety Executive (HSE) test method for the assessment of floor slipperiness in both dry and contaminated (wet) conditions. This portable test can be used to test floor products in both laboratory and real world locations and conditions and uses a swinging test apparatus which simulates the act of walking.

Based on recommendations from the HSE, you should use floor finishes that achieve a Pendulum 4S (Slider 96) of 36+ for shod foot areas, and / or a Pendulum TRL (Slider 55) of 36+ for wet barefoot areas, to achieve a low slip potential environment. The table below illustrates how the HSE categorise the results from the Pendulum tests for both the 4S Slider 96 and TRL Slider 55:

**0 - 24** (High Slip Potential)

**25 - 35** (Moderate Slip Potential)

**36+** (Low Slip Potential)

Pendulum 4S and TRL results shown are based on Johnson Tiles' internal test reports along with information available at the time of print and are to be used for guidance purposes only. Project specific requirements should be used and checks should be made so that the requirements at the time of specification are incorporated. Further information is available from – [www.hse.gov.uk](http://www.hse.gov.uk)

## R Values

German ramp tests are used to generate the R Values (DIN 51130) used most commonly in Northern Europe. This test can only be carried out in laboratory conditions, so this does not allow for the testing of materials in real world locations. DIN 51130 (R Values) is a shod foot test which uses oil as a contaminant. These results are interpreted into five groups:

**R9** (6° to 10°)

**R10** (11° to 19°)

**R11** (20° to 27°)

**R12** (28° to 35°)

**R13** (>35°)

R Value ratings have generally been used to assess product suitability in the UK. However, this is changing dramatically following recommendations from the HSE with the preferred test method being the Pendulum test.

*All product technical values quoted are supported by laboratory testing from our own and independent ceramic test houses. Johnson Tiles are British Standard registered and all products conform to the standards set in BS EN 14411 (formerly BS 6431).*

*For the reassurance of single source supply, Johnson Tiles offer a free of charge NBS M40 specification writing service featuring the Norcros Adhesives range of tile fixing products. To find out more or for any questions or queries relating to any of the tile related technical information featured in this brochure, please contact our Technical Support Helpline on +44 (0)1782 524 111 or email [techadvice@johnson-tiles.com](mailto:techadvice@johnson-tiles.com).*

*The colours shown in this brochure are as accurate as printing processes and/or screen calibration will allow. Please refer to actual product samples before specifying. Every effort has been made to ensure the accuracy of the information given in this brochure.*

coloured object, floor, wall or ceiling. LRV is measured on a scale of 0 to 100 where 0 is perfect black and 100 perfect white (in reality 0 and 100 are unobtainable colours). According to NCS Colour Centre in practical terms black is approx 6 and white approx 85.

The current guidelines from Building Regulations Approved Document M on contrast are that a minimum different of 30 LRV points should be specified for adjacent surfaces to ensure that visually impaired people are not discriminated against. In a specific example of ceramic tiles this difference should be between:

### Floors to Walls

### Ceiling to Walls

### Handrails to Walls

### Sanitary Fittings to Walls

The visual contrast between floors and walls is important in enabling visually impaired people to assess and gauge the size and shape of a room.

## Wet Ramp

German ramp tests are used to generate the ABC ratings (DIN 51097) used most commonly in Northern Europe. This test can only be carried out in laboratory conditions, so this does not allow for the testing of materials in real world locations. DIN 51097 is a wet barefoot test in which a soap solution is applied as a contaminant, the results from this test are placed into one of the following three categories:

**Class A** (12° to 17°)

**Class B** (18° to 23°)

**Class C** (>23°)

ABC ratings have generally been used to assess product suitability in the UK. However, this is changing dramatically following recommendations from the HSE with the preferred test method being the Pendulum test.

## PEI Ratings and Traffic

Porcelain Enamel Institute (PEI) ratings refer to the surface abrasion resistance of a glazed floor tile. The test is only used for glazed tiles. Through-body porcelain and un-glazed porcelain are tested using the EN ISO 10545-6 Deep Abrasion Test. All glazed floor tiles shown in this brochure are rated with a PEI value which in turn gives a foot traffic suitability recommendation, these values and recommendations are split into the following five categories:

### PEI I (Light Domestic Traffic)

*Floors walked on with soft soled footwear with no scratching dirt – for example: residential bathrooms without direct outside access, en-suite bathrooms etc.*

### PEI II (Domestic Traffic)

*Floors walked on with soft soled or normal footwear with no scratching dirt – for example: residential bathrooms without direct outside access, en-suite bathrooms etc.*

### PEI III (Light Commercial Traffic)

*Floors walked on with normal footwear with small amounts of scratching dirt – for example: residential halls, corridors, kitchens or conservatories.*

### PEI IV (Commercial Traffic)

*Floors walked on by regular traffic with the presence of some scratching dirt but more severe than PEI III's – for example: hotels, restaurants and shops without direct external access.*

### PEI V (Heavy Commercial Traffic)

*Floors subject to severe pedestrian traffic over sustained periods with the presence of some scratching dirt – for example: shopping centres, hotel foyers, commercial floors, institutional uses etc.*

The greatest visual contrast must occur where the floor meets the wall (skirting) as this gives the most accurate visual indication of the extent of the room. Where provided, skirtings should contrast visually with the floor and be similar in colour and tone to the wall surface.

*This information is not exhaustive and the requirements at the time of specification must be checked. BS8300:2001 Amendment 1 indicates that there is anecdotal evidence to suggest that a 20 point LRV difference may be sufficient – especially where large adjacent areas are involved.*

*It must be noted that the guidance on LRV values given in this brochure is correct at the time of print. This is a subject that may be reviewed by the regulatory body at any time so it is advisable to check the guidelines at the time of specification of product.*

*The Equality Act details given in this brochure are to be used as an outline guide only and are the details as Johnson Tiles understand them at the time of print. Further qualified advice should be sought if any of the details given above are in doubt.*

## Colour Shade Variation (CSV)

Colour Shade Variation (CSV) values are assigned to wall and floor tiles within this brochure. These values are to be used for guidance only. Shade, colour and pattern variation are inherent characteristics of all ceramic and porcelain tiles. CSV is split into four categories:

### V1 (Low Shade Variation)

*When installed and mixed correctly the effect is a consistent overall appearance.*

### V2 (Low to Moderate Shade Variation)

*When installed and mixed correctly the effect is a finish with subtle shade differences.*

### V3 (Moderate to High Shade Variation)

*When installed and mixed correctly the effect is a finish with a moderate degree of shade variation.*

### V4 (High Shade Variation)

*When installed and mixed correctly the effect is a finish with a high degree of shade variation.*

## General Information

During the manufacturing process of ceramic and porcelain tiles, some variation in shade and pattern can occur. Before fixing any tiles, several boxes should be opened and their contents mixed to ensure that size, colour, shade and patterning are acceptable. The tiles shown are quality products and conform to the physical properties listed in this brochure.

**All sizes shown are metric modular.**

**For specific suitability and fit-for-purpose details please contact our technical helpline.**

**Johnson Tiles cannot accept responsibility for any tiles that have been fixed.**

**Every effort has been made to ensure the accuracy of the information given.**

**Johnson Tiles reserves the right to change specifications and availability without prior notice.**

**Nothing in these statements does or will affect the statutory rights of the consumer.**
